TV Series on DVD pops up disc selector instead of playing episode

Symptoms:

Having added a Disc Title containing a TV Series, you receive a disc selection dialog when pressing "Play" on one of the TV Series episodes.

Cause:

Your titles are stored as another media type than the required VIDEO_TS folder structure, or your title is not pointed correct to the path. The format you have your media stored in could be ISO files or individual files, both of which is not supported for TV Series on DVD.

Solution:

You must store your titles in VIDEO_TS folders for the TV Series on DVD functionality to work. Notice also that the location must be pointed to the folder above the VIDEO_TS folder as "Online (Folder)" type, and not the VIDEO_TS folder itself, and not as the "Online (File)" option pointing to a specific VOB file.
