Folder monitoring does not remove deleted titles

Symptoms:

If you have folder monitoring enabled, and delete a title from the storage device, such as a harddrive or a network storage, folder monitoring does not remove the title from your collection.

Cause:

Folder monitoring only removes titles that was added by folder monitoring to begin with. It does not remove titles that you have manually added using the Collection Management program. It operates this way because it assumes that titles you have added manually are titles you would like to control yourself, rather than having folder monitoring control them. You can say this is an "automatic in - automatic out", "manual in - manual out" functionality.

Solution:

There are at this point not an option to handle this scenario differently in the system.
