How do I upload my collection from Collection Management to iPhone, iPad, Android or Windows Phone?

Question:

I have my movie collection in the My Movies Collection Management program for Windows, and would like to make my collection available in My Movies for iPhone, iPad, Android or Windows Phone. How do I do that?

Answer:

In the Collection Management program, select the "WebService" menu, and the "Synchronize Online and Mobile Collection" option, and select "Upload to Server" and press "OK". If you do not yet have an online and mobile collection configured, the "Configure Online and Mobile Collection" dialog will open before the "Synchronize Online and Mobile Collection" dialog - here you configure your online and mobile collection and press "OK".

Notice! When uploading the collection from the Collection Management program to the online servers, you will remove all titles that you might currently have on your iPhone, iPad, Android or Windows Phone device, and replace it with the content from the Collection Management program. The data on the mobile devices cannot after this be restored.
