How can I select a random movie?

Questions:

How can I select a random movie from my collection?

Answer:

You can select a random movie from your collection in My Movies for iPhone, iPad or Android by shaking your device. You may combine the functionality with the filter functionality by selecting a sub-set of your collection using filters, and then shake your device to pick a random from within the filtered collection - from the movie details page, you can shake your device again to select another random title.
