I have blue bars around the picture when playing through TotalMedia Theatre

Issue:

There are blue bars around the picture when playing movies through ArcSoft TotalMedia Theatre. Can I get rid of these?

Cause:

ArcSoft TotalMedia Theatre runs in an Hosted HTML shell which is a technology available in the Windows Media Center SDK. Depending on the screen configuration in Windows Media Center, overscan correction will be added to all Hosted HTML applications as a blue bar around the cover.

Solution:

You must change the configuration of your screen in Windows Media Center settings, under "TV", "Configure Your TV or Monitor".
